

The Highest Quality Measurements and Imaging Data

Let the experienced M2S project team assist your R&D team to provide the highest quality measurement and imaging data for your projects. We're currently working on projects for next generation modifications, new product development and expansion of IFU criteria.

And our 3D modelling capabilities are ideal for your feasibility studies.

We have a proprietary database of over 250,000 scans for endovascular aortic repair procedures, and six million measurements of AAA and TAA cases.

We offer a range of services including but not limited to:

- Custom measurements including BEVAR/ FEVAR and other advanced suites
- Data mining from our existing database
- 3D reconstructions of bony, vascular, cardiac, and contrast enhanced internal anatomy from computed tomography.
- Creation of stereolithography data for 3D printing
- Other custom requirements

We work with the leading device manufacturers to ensure to provide the best service and the best measurements.

Talk to us today about your individual needs. Call the Special Projects team on 603.298.5509 or email specialprojects@m2s.com.
